

Measure with the new face of μ Shape™ v8 now!

The unique μ Shape™ interferometer software has been launched with a new graphical user interface (GUI) and several new features!

The old motto "features and functions" has had its day and is being replaced by "usability and user experience". The focus of the revision of the μ Shape™ 8 software was on the needs of its users and their experiences with the previous versions. The new version 8 of the μ Shape™ interferometer software brings usability and user friendliness to the next level.

That's new and well-proven in μ Shape™ v8 !

- A simply structured, clear and user-friendly graphical user interface with new icons
- Flexible and user-defined screen display adapting to every monitor size
- Fully Windows 10 compatible, running both on 64-bit and 32-bit systems.
- Live image: display on 2nd screen as an additional window
- MetroPro compatible file format extended by sample parameters from task description
- An additional 2-dim. polynomial fit as adjustment fit
- Reworked installation and new installation medium, now released on USB stick
- Some revisions in existing add-on modules (e.g. Torus analysis, Sample Normal Data, External interface, FastFringe and MultiStatistics)
