

# Technical data OptiSurf® LTM

---

|                                                                | OptiSurf® LTM                               |
|----------------------------------------------------------------|---------------------------------------------|
| Sample diameter                                                | 1 mm ... 200 mm (with 2 chucks)             |
| Glass thickness                                                | 0.2 mm ... 50 mm, can be expanded to 150 mm |
| Accuracy of center thickness measurement (geometric thickness) | $\pm 0.5 \mu\text{m}$                       |
| Measurement wavelength                                         | 1310 nm                                     |
| Dimensions (h x w x d)                                         | 409 mm x 500 mm x 548 mm                    |
| Weight                                                         | 35.9 kg                                     |
| Type                                                           | Table top device                            |
